

## ALPU1000 hand held programmer

### overview

The ALPU1000 hand held tool is designed to program and read various parameters stored within the Altair detector family. All other intelligent devices can be programmed via a plug in cable which is supplied with the device. The ALPU is also designed to program the ABL5100-32 and ABL5100-32-AV base sounder and base sounder beacon.

### description

The user interacts with the ALPU1000 device using a built-in keypad and display. This interface navigates through a menu based set of options and commands.

The programming device can:

- Read and set analogue address of device
- Select the specific type of thermal device
- Read the firmware version and other device data
- Program multi-module device
- Program conventional zone module
- Program tones of the 32 tone base sounder

### technical data

power supply battery	6LR61 type – 9 volt
